

AI Data Rules — One Page

Before you put anything into Claude (Chat, Cowork, or Code).

Version 1.1 · July 2026 · Hans Tandt

The key principle

Chat, Cowork, and Code are about workflow, not confidentiality. All three send your content to Anthropic's servers, so "it runs on my computer" does NOT make sensitive data safe. Classify the data first. (You can stop your data being used for training in Settings, Privacy — but it is still processed on the server.)

The traffic-light rule

Light	Means	Examples	What to do
GREEN	Public / harmless	Public info, marketing text, general how-to questions.	Use freely.
ORANGE	Internal / operational	Internal procedures, non-personal company data.	Allowed in approved tools; avoid unnecessary detail.
RED	Sensitive	Personal data, legal/warranty disputes, contracts, accident files.	Anonymise, get approval, or keep out.

Two ground rules (always)

1. Confidential material only in approved tools and accounts.
2. A human always reviews before anything is used or sent.
